802 11 Wireless Networks The The 802.11 Wireless LAN working group came into existence in 1991 to create standards for 1 MB/sec Radio Frequency (RF) based data network technology. This working group provided the first 802.11 standard in 1997, called the 802.11 Wireless LAN standard, which is implemented at the Physical Layer and the Data Link

IEEE 802.11 - Wikipedia

Wireless networks use a number of base stations to connect users to an existing network. (In an 802.11 network, the base stations are called access points.) The infrastructure side of a wireless network, however, is qualitatively the same whether you are connecting one user or a million users.

WLAN (wireless local area network) channels are frequently accessed using IEEE 802.11 protocols, and equipment that does so is sold mostly under the trademark Wi-Fi. Other equipment also accesses the same channels, such as Bluetooth. The radio frequency (RF) spectrum is vital for wireless communications infrastructure.
