Exposure to extreme heat can  
result in occupational  
illnesses and injuries. Heat  
stress can result in heat  
stroke, heat exhaustion, heat  
cramps, or heat rashes. Heat  
can also increase the risk of  
injuries in workers as it may  
result in sweaty palms,  
fogged-up safety glasses, and  
dizziness.**

**preventive heat stress management plan is contained in the OSHA Technical Manual available from the Occupational Safety and Health Administration's Web site on the Internet: [www.osha.gov](http://www.osha.gov). What is heat stress? Heat stress is the condition experienced by the body as it struggles to withstand the buildup of excessive internal heat. Serious stress can develop as the body's self-regulating "thermostat" fails to maintain body temperature at its normal level.**
